Erick Valdés, Juan Alberto Lecaros (Eds.)

Biolaw and Policy in the Twenty-First Century

Building Answers for New Questions

Series: International Library of Ethics, Law, and the New Medicine

- Presents the state of the art in biolaw, with a focus on biomedicine
- Gathers contributions by some of the world's most prominent experts on biolaw and bioethics
- Considers controversial topics straight from today's headlines

This book offers an impressive collection of contributions on the epistemology of international biolaw and its applications, both in the legal and ethical fields. Bringing together works by some of the world's most prominent experts on biolaw and bioethics, it constitutes a paradigmatic text in its field. In addition to exploring various ideologies and philosophies, including European, American and Mediterranean biolaw traditions, it addresses controversial topics straight from today's headlines, such as genetic editing, the dual-use dilemma, and neurocognitive enhancement. The book encourages readers to think objectively and impartially in order to resolve the ethical and juridical dilemmas that stem from biotechnological empowerment and biomedical techniques. Accordingly, it offers a valuable resource for courses on biolaw, law, bioethics, and biomedical research, as well as courses that discuss law and the biosciences at different professional levels, e.g. in the courts, biomedical industry, pharmacological companies and the public space in general.
